

Cloud Telephone System

Hosted Cloud Telephone System Solutions provide you with Unified Communications that reduces your reliance hardware to just network equipment, telephone handsets and/or soft-phones.

The 'brains' of your telephone system is hosted in secure data centres, with your voice traffic being carried over an internet connection. This makes for an incredibly simple installation with minimal disruption to either your team or your operations, for single or multi-site deployments. Once installed, your hosted cloud telephone system will quickly provide you with immense operational flexibility.

With a hosted cloud telephone system, you are charged per user, per month for the service, negating the need for an upfront capital expense and making your costs operational.

Adopting a hosted cloud telephone system is perfect when it is time upgrade your existing solution, reducing the complexity of your communications infrastructure while providing you with flexible communications management and a host of powerful enterprise features.

Hosted Cloud Telephone System Benefits

-  **Less need for maintenance, upgrading and support.**

You won't be directly responsible for the maintenance or support of the system as that is covered by your hosted cloud telephony provider. Additionally, updates will be rolled out automatically as they become available without the need to purchase additional licensing or incur additional costs. Lastly, your hosted cloud telephone system management and configuration is easy through a simple and clear web interface, making moves, adds and changes stress-free and fast.
-  **An improvement in your disaster recovery stance.**

A hosted cloud telephone system by default offers you substantial assistance with your disaster recovery and business continuity planning. Should you be unable to access your workplace for any reason, your team would be able to access your telephone system from anywhere else using a variety of devices, including their own smart phones. You won't miss vital communications and will be able to collaborate normally as you put your other disaster recovery plans into operation.
-  **Security is baked into the solution.**

Hosted Cloud Telephone Systems typically have less security vulnerabilities compared to onsite telephone systems. They are generally hosted in secure and reliable private cloud environments and are replicated to secondary, secure locations. By default, they are hosted on secure infrastructure with multiple layers of security and high-level encryption.
-  **Increased flexibility with the ability to scale up and down quickly and easily.**

The ability to effortlessly scale based on your business needs is a commonly-cited reason for upgrading to a hosted cloud telephone solution. The ability for hosted systems to integrate mobile and fixed line systems into one more complete solution is an obvious draw, as is the fact that they can be scaled up or down depending on your changing organisational needs. You may need to scale your operations during peak periods, or perhaps you open a new office in a new city. Either way, your hosted cloud telephone system will be able to handle the new users and the load. Lastly, accommodating remote working becomes easy.
