

Cyber Security Audit

Discover the Cyber Security risks to your business data and understand what it would take to mitigate those risks.

We will provide you with a high-level independent cybersecurity audit that will give you valuable insight into your potential for data loss, your breach susceptibility and other risk factors that may leave you vulnerable.

The results of your audit will help drive continuous improvement and will allow you to prioritise any critical changes needed to reduce your exposure to cyber-attack.

This is a particularly valuable service if you have yet to document your risks, vulnerabilities and exposure to threat, or if you would like to seek assurances about the effectiveness of any measures that you have deployed.

We will assess the following:

- ✧ Your governance of cyber risk.
- ✧ Your data security and risk management.
- ✧ Any legal or regulatory compliance needs.
- ✧ Your backup and business continuity plans.
- ✧ Your physical controls.

This cyber security audit is a valuable forerunner as you look to conform with upcoming regulatory compliance, such as the impending General Data Protection Regulations (GDPR), standards such as ISO 27001:2013, Cyber Essentials and the like.

Cyber Security Audit Benefits

-  **Valuable education and enhanced security awareness.**

The audit process will bring the importance of cyber security to the forefront of your team's mind. The more aware your team is of the constant threat that you are under, the more likely they will embrace habit forming changes to their activities and those could be the difference that prevents a catastrophic IT event. The audit will also ask questions of your existing backup and business continuity plans, which could highlight inadequacies that you need to overcome.
-  **Benefit from an independent, external assessment carried out by experienced cyber security experts.**

Maintaining a secure IT environment is hard. You need to ensure that your business-critical applications and data are available, as well as secure 24x7x365. It makes sense not to rely on in-house guesswork when you can engage with an independent and experienced IT security audit team.
-  **You get an actionable list of prioritised activities to help reduce your risk profile.**

We have the tools and experience needed to identify your security weaknesses. From this, we will provide you with a report that will help guide you as you develop a strategy to overcome those weaknesses.
-  **You get a high-level and easy to digest summary of your cyber security risk with minimal disruption to your business.**

Minimise your risk before finding out about your cyber security vulnerabilities via a catastrophic IT event.

Discover where your cyber security risks lie.

Our experienced cyber security professionals will help you stay safe.
